

Hayward Tyler Ltd, Luton – Career Paths

Shak Choudhury, Technical Specialist - Analytical Engineer, Projects

"I met HTL at Brunel's Engineering Showcase where I was showcasing my 3rd year thesis in 2015. HTL and I remained in contact and I was offered an eight week work experience opportunity. At the end of my work experience with HTL I was offered a position as a Design Engineer and I'm now a Technical Specialist. Almost straight away I was enrolled onto the IMECHE MPDS programme, which is a mentor based programme that will aid me in becoming a chartered engineer. This has allowed me to set targets and objectives based on competences set by the IMECHE board and regularly receive advice from my mentor. I have recently started my Masters at Cranfield University, which HTL have sponsored. I've had great mentors and the advice and support has guided me to achieve far beyond my expectations within my first 2 years and moulded me as a competent engineer, providing me with the confidence to tackle more challenging projects.

The support I have received at HTL has enabled me to plan my future I intend to finish both my Masters at Cranfield and my MPDS programme becoming a Chartered Engineer. This will allow me to support the growth of our department and build the capabilities to start providing consultancy based projects for our Customers.

I owe a lot to Hayward Tyler and I am grateful for the position I am in now. I believe I would not have gained this much support if I had not been with HTL. Our business provides a challenging, supportive and caring atmosphere which has the capability of fully developing graduates and employees".
